“Rocky Flats Disaster: Red Light for SRS Plutonium Bomb Plant”

November 12, 2019, Aiken, SC library

www.srswatch.org

Tom Clements, director SRS Watch, has issued a list of demands that DOE’s National Nuclear Security Administration (NNSA) must comply with before the Plutonium Bomb Plant at the Savannah River Site progresses any further. Those demands, which NNSA has refused to talk about, include the following:

- 1. Plans for the Plutonium Bomb Plant must be halted until authorized and funded by Congress.**
- 2. Justification must be given for the “need” for the new “W87-1-like” warhead, for which new pits must be made and which poses the risk of stimulating a new nuclear arms race.**
- 3. A “nuclear non-proliferation impact assessment” must be prepared on the risks of the Plutonium Bomb Plant and the new and provocative “W-87-1- like” nuclear warhead.**
- 4. The legally mandated Programmatic Environmental Impact Statement (PEIS), to analyze the pit project’s overall need and role of all DOE facilities in that project, must be prepared by NNSA.**
- 5. The MOX debacle must be investigated by Congress for fraud, waste, abuse and mismanagement before any consideration of converting the ill-constructed MOX facility into a bomb plant.**
- 6. The SRS Watch request under the Freedom of Information Act (FOIA) for documents on the plutonium fuel (MOX) plant “repurposing” into a Plutonium Bomb Plant must be responded to.**
- 7. Special Grand Jury documents concerning Rocky Flats contamination and illegal activities at the site must be publicly released and the cover-up ended. No construction on the former Rocky Flats site.**
